Describe:

On March 5, 2015, a Dupre Logistics tanker trailer (#22180) experienced a release of NA1993 Diesel Fuel due to a fuel overfill during transfer into a UST. Approximately 150 gallons of diesel fuel was released to the concrete fueling station. ERTS dispatched E3 Environmental to apply granular absorbents and pads to collect all free standing liquids. Bio-remediant was applied to the impacted concrete area thereafter. The remaining material was trans-loaded into the UST. All waste was containerized and transported for disposal by E3 Environmental personnel. No soils, drains, or waterways were impacted by this incident. The site was restored to its previous condition.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.
