Describe:

On 08/30/15 at 1745 hours CSXT yard personnel at the CSXT Sibert Yard terminal located at 2000 Industrial Canal Rd E Mobile, AL discovered CPDX582145, a loaded tank car of Molten Sulphur, that was actively leaking from the pressure relief device. The car was isolated, the yard evacuated in that area, and the shipper, Chevron Corp, was notified. All CSXT personnel sheltered in place, the yard was shutdown, and the CSXT mainline was shutdown. United States Environmental Services (USES) and SWS Environmental, a CSXT response contractor, was dispatched to the scene. CSXT Hazmat Field Manager Trent Page responded. Further inspection revealed that the car was actively leaking from the PRD assembly due to corrosion and damage to the seat around the rupture disk. One of the three bolts on the PRD assembly was also loose. The issue was identified and corrective actions were communicated to the shipper (Billy Burrell). USES, SWS, and Trent Page replaced PRD rupture disk, the gasket, applied Teflon tape, and tightened the PRD assembly. The leak was temporarily secured. On 08/31/15 the shipper dispatched Freight Car and the PRD top assembly was replaced. The leak remained secured.
