Describe:

An employee was loading freight into a trailer (behind the IBC totes) when the fork blades on his forklift speared the tote, approximately one third of the way up from the bottom of the tote. The trailer was pulled from the dock area in an effort to minimize exposure to employees. The trailer was parked in the gravel lot area of the yard and the leaking material was contained with speedy dry in an effort to keep the liquid from spreading. ChemTrec was called (report#2009061000005 spoke to Kedron Holden) who faxed us an MSDS. Our hazardous material clean up vendor, Environmental Product & Services of Vermont, was called to perform the clean up.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.
