PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

Due to a braking event during transit, a tote inside the trailer shifted forward. Two totes were strapped in using one tie down but due to the braking force, the tie down broke away from trailer wall. One tote made contact with a skid of pails, causing the side wall of one tote to become compromised. Emergency Response & Training Solutions (ERTS) was immediately contacted to coordinate with a local contractor who was sent out to the location of the release. Neutralizer and absorbent material were used to mitigate the released material. The released material was transferred into overpack containers for later disposal. Due to the hazard of the material, the package specifications were not able to be obtained.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

A more sufficient use of blocking and bracing methods may have prevented this release or loading the packages in the nose of trailer and then strapped in. This particular incident has been used in employee training meetings as an example of the importance of proper blocking and bracing during transportation.
