Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

During unloading, one 330 gallon poly tote was punctured via forklift resulting in approximately 330 liquid gallons to be released to the trailer floor, asphalt parking lot, and adjacent soil. A contractor responded to conduct clean up operations under the supervision of the local FD.

The product has oxidized by the time an excavation of the soils had occurred. All impacted material was containerized and is currently awaiting disposal. Analytical results have indicated that the waste will be disposed of as non-hazardous.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

An improved initial response may have limited the amount of soil that had been impacted.
