PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

Driver was filling a 5250 gallon ASME bulk storage tank at a customers facility. While filling the container the pressure relief valve on the receiving tank failed resulting in a release of product to the atmosphere. The tank was at approximately 72% capacity when the relief valve failed. The relief valve reset when the tank capacity was approximately 55% resulting in a release of an estimated 900 gallons of propane to the atmosphere. The tank was isolated and plugged on the site. Prior to removal all remaining liquid was pumped from the storage tank and depressurized. The tank was subsequently removed from the customer location for repair.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

Tank was removed and replaced with 2 1000 gallon ASME tanks. Relief device was removed, but no testing was performed on the component to determine a reason fro failure.
