Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

Transport driver unloaded into the wrong tank at bulk storage facility and overfilled tank. The driver thought he was unloading into correct tank and did not check volume of tank he was actually unloading into which resulted in a spill. Diesel fuel spilled from vent on tank. Most spilled fuel was inside containment but some sprayed onto dirt outside containment. The spill was reported to NRC and state of Colorado. Western Cleanup Corp. of Ft. Morgan, CO was contracted for site remediation. Contaminated soil was excavated, sampled and disposed of. Product from inside containment was vacuumed up and disposed of.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

Driver responsible for this spill is being retrained on unloading procedures. We reviewed site with customer for better access to valves and tanks so we can get better readings. We are reviewing procedures with all drivers.
