Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

The tank car was determined to be overloaded, with the magnetic gauging device indicating a liquid level exceeding 48 inches. The shipper confirmed that the car had been loaded with approximately 33,960 gallons of product. As ambient temperatures increased throughout the day, the product expanded, causing internal tank pressure to rise. Once the pressure reached the Pressure Relief Device (PRD) set point of 280 psi, the PRD activated and released liquid product from the tank car.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

Assure that cars are managed to federal compliance to eliminate the release of product for the tank cars being loaded.
