PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

Driver was distracted and jerked the wheel as a reaction. The truck tires went off the road. Driver attempted to get his tires back on the road and lost control which caused the rollover. The Rollover caused a crack in a liquid valve; this is the site of the propane release.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

The company has a rollover prevention policy titled, "SLIP OFF STAY OFF" with cab posters and training reminders. The idea is to bring the vehicle under control without attempting to radically change the path which can cause liquid load shifting and add to the potential for overturn. After each such accident a committee reviews the investigative facts to determine whether the driver followed company safety practices and whether disciplinary actions are appropriate. Our employees receive recurrent training for defensive driving, proper backing techniques and how to prevent rollovers. Employees must pass a driver recertification test every three years.
