During standard unloading process of LP Gas trailer, residents of nearby townhouses reported gas smell due to driver bleeding down unloading hose after delivery (standard procedure). Bedford, NH. fire department and Bedford, NH. police department responded to townhouses. They called the local utility company to take gas readings in buildings. Utility company got reading of 2% which initiated evacuation. Fire department got a 0% reading. Found out that the utility company's meter had not been reset after last reading, causing a false reading of 2%. Residents were allowed back in building after this finding. They were evacuated for 15 minutes. The incident was called into the NRC as a matter of formality. Weather conditions and wind direction played a significant role in this incident.
