Describe:

Driver discovered a small vapor cloud coming from the rear cabinet of the cargo tank. He had driven approximately 45 miles from the shipper location and was in a very primitive rural area. Upon investigation he noted that the leak was coming from around the main fill valve. He called the shipper and was instructed to return to their facility. The shippers in house response personnel were able to stop the leak. The leak resulted in the loss, to the atmosphere, of approximately 3500 pounds of Liquid Helium.

The valve was warmed to ambient temperature and tightened which stopped the leak.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

None at this time.
