PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

The semi was passing a farm tractor. When the semi and half of the tank was past the farm tractor, the tractor driver turned left and hit the side of the tank. The farmer was trying to turn into a field approach.

The farm tractor forced the semi and tank off the road and into a ditch. The tank separated from the semi and rolled over several times. The semi then went into the ditch and rolled over.

The piping on the discharge side of the pump was torn off and a gasket inside the internal valve ripped and stuck inside the valve preventing it from closing completely. Anhydrous released and blew toward the semi where the driver was unconscious.

A water fog was sprayed onto the leaking anhydrous but the cold weather made the release slow until it was barely noticable allowing responders to approach the tank and install a valve on the pump discharge to eliminate the release.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

The addition of a manual valve upstream from the pump would have stopped this release. This would add a back up shut off incase the internal valve failed.
