Describe:

On October 6, 2014, Baker Hughes experienced a tote failure after (1) 330-gallon tote was dropped during loading operations from a fork-lift. The tote bottom consequently gave way when it fell from the fork lift and released approximately 120 gallons of UN1908 Sodium Chlorite 25% to the dirt/gravel lot, impacting an area measuring approximately 50'x60'. No drains or waterways were impacted. ERS of Oklahoma was dispatched to clean the released material on the lot. On-site Water Management personnel conducted a transfer of the remaining material into a new tote. All contaminated soils were collected and taken for disposal. The site was restored to its previous condition.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.
