Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

While making a delivery to Town of Nederland, the straps on an IBC containing sodium hydroxide solution slipped causing it to fall off the truck and break. The contents of the tote were released onto the roadway. DPC contacted waste remediation contractor, Environmental Restoration, to clean up the area. CDPHE was contacted of incident.

Once it was determined the RQ had been exceeded, NRC was called. The clean-up operations were already initiated. Spill was contained and did not impact nearby waterway.

At spill site, Environmental Restoration met with state and local regulators as well as the fire department to determine the scope of work. It started to rain about 4 pm so the team begins neutralizing spill area with citric acid. The roadway was rinsed with water and collected in vac truck. Soil and gravel in impacted area was collected for disposal. Random samples were tested with strips to confirm pH of 7.

Collected material will be disposed of by Badger Daylighting. DPC has requested copies of manifests for their files. Approximately 200-gallons of neutralized caustic soda solution and soil slurry sent for disposal.

There were no injuries.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE
