Describe:

An odor next to his car was reported by a switching crew with one of the crew members requesting to go to the hospital for evaluation shortly thereafter. Upon arrival an odor was present at ground level next to the car. The car was climbed and frosting was visible on the exterior of the B end protective housing. The seal was removed, the cover opened, and a visible leak was emitting from the B end liquid valve in a spray like fashion from the plug. The valve was checked and found to be open approximately 1/8 of a turn and the plug was less than tool tight. The leak slowed when the valve was closed. The plug was properly secured and the remaining valves and fittings were checked with no issues found. The car was resealed and released back into transportation.
