PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

The tank car was noted in the yard as leaking a substantial amount of product from the four-bolt flange that secures the bottom outlet valve nozzle to the bottom of the tank car. Upon inspection by a BNSF HazMat Responder, it was determined that the four securement bolts were loose. Upon attempting to tighten the bolts, only one could be tightened and the remaining three were stripped and unable to be tightened. A contractor then applied a large ratchet strap completely around the tank car and under the BOV. Pressure was applied and the leak subsided. The car was then moved over containment for the remainder of the night.

The following day, transfer of the product from the defective car to an empty car commenced and was successful in transferring the remaining product.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

The shipper must ensure that all securement bolts are properly tightened prior to transportation.
