Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

A Trimac tractor tanker was involved in an apparent roll over incident in which an estimated 1 gallon of UN2218 Acrylic Acid was released to the pavement and adjacent soils along with an estimated 5 gallons of diesel fuel and engine fluids. The contractor transferred the rolled over tanker into a replacement tanker. They then neutralized the released acid, applied absorbents to the impacted areas, worked the absorbents in and swept the impacted areas clean. They then hand excavated the impacted soils. All waste was containerized and transported off site for pending disposal.

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.
