Describe:

PVS Transportation driver was scheduled to make a HCI delivery to Thomas Steel. The driver arrived on site, asked the customer if they could receive the full delivery. The customer confirmed they could receive the entire delivery. The gauge read 1,400 gallons and the driver had approximately 4,000 gallons of HCI on his trailer. The tank is about 100-200 feet away with a max capacity of 7,000 gallons. The driver was within 25 feet of his trailer watching the connection on his trailer. During the offload, the driver noticed fumes coming from inside the building. The driver proceeded to notify onsite personnel who mentioned it's no big deal and to continue the unload. The driver proceeded to continue the unload and the driver is stating about 200 gallons was released inside the containment which will be pumped back into the tank.
