Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

According to the information obtained, the following occurred. Following offload at customer location, a hose backflow occurred, which resulted in the loss of approximately 600 gallons of sodium hydroxide solution from the customer's tank. The free product released to the asphalt surface, adjacent soils, and entered into a storm drain onsite. Trans Environmental of Loves Park, Illinois was dispatched to perform the cleanup. Stockton Cheese personnel proceeded to flush the lines, to prevent migration. Trans Environmental used absorbent material on the free product, secured the area, and coordinated excavation of impacted soils. Trans Environmental returned to the site, excavated impacted soils, and pulled samples from impacted area to confirm no further contamination remained. There were no injuries or exposures reported.
