PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

A service technician was picking up an older model 1000 gallon tank that our customer was no longer using. He had just loaded the tank onto a single axil 2 wheeled trailer when the release occurred. The gas in the tank may have shifted due to too much weight on the tire. While on the trailer, the tank tipped to its side and bent the external relief valve causing it to vent. He was not driving. Tank was at 75% so about 720 gallons dissipated unti tl the tank was empty.

There is no evacuation valve on this older model tank. The filler valve on this older model tank did not have a dip tube. The only way to get the gas out of this older model tank is to tip it on it's side and evacuate it though the filler valve. Flaring it off wouldn't have been an option without tipping it over either. Our service technician thought it would be safer to evacuate the tank at our yard instead of at the customer location. The Ferrellgas yard is approximately 2 miles from the customer location.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

Remidial training.
