Describe:

Lang was unloading the tanker and filling totes. He had finished a tote and was getting ready to move the nozzle to the next tote. The nozzle got caught on the lip of the tote. When that happened, Lang bumped the handle of the valve causing it to open. The product came out of the nozzle and sprayed product on Lang. The product got under his face shield causing burns to his lips and eyes. Lang was not wearing his goggles. Lang also said he did not believe that he got any product directly in his eyes. He thinks it was diluted product from decontamination that got in his eyes.

Locking valves on the nozzle

Follow PPE requirements while unloading corrosive material

Emergency safety shower needs to be located at unloading area. If unable to do there needs to be a hose with sufficient water pressure to decontaminate a person if they were to come into contact with the product.

Review proper safety shower usage/decontamination procedures with all employees.
