Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

A 330 Gallon IBC filled with NFS Acid developed a crack in the top of the IBC during transit. The crack spread down the side of the container allowing HFS to spill into the trailer. The driver pulled over and made notifications per company policy. Management notified local Fire Department who then called other agencies. Company's internal spill response team arrived and worked with Fire Department responders to transfer cylinders that were located between the leaking IBC and the rear of the trailer. A pump was used to transfer the remaining product into a new IBC. A contractor was hired to clean up pavement and soil where HFS had leaked out of trailer.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

We will evaluate the expected service life of HFS IBCs.
