Describe:

On 3/3/23, the Y SPO1011 03 was working on the east end of Hauser yard. During their work, the crew noticed locomotive diesel fuel leaking out of the bottom of the TCBX 286060, listed as line 18 in track 3509. It was at this time that the crew notified the yardmaster who immediately notified BNSF mechanical and transportation officers on site. BNSF Mechanical promptly contacted the BNSF Hazmat team and began an active investigation into the leak and to apply containment. The BOV was found with an ice plug in the broken BOV cap with damage to the closed BOV. Fuel was recovered into a vacuum truck while a transload of remaining fuel occurred to another car.

An estimated 7,768 gallons was released from the car with approximately 6,350 gallons reaching soil. Spilled fuel impacted tracks 3509 and 3510. Investigation into extent of fuel impacts to soil and remediation began immediately. Soil impacts and remediation are being coordinated with ID DEQ.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:
