- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

### Describe:

Trailer was in line to unload and while waiting to decant. Temps were below 0 deg F. The normally open fire protection system lost supply pressure due to a frozen 1/4" swagelok tube blockage from frozen oil. All 4 cylinders vented. The required constant supply pressure was at 0 psig from a normal 90-100 psig supply the the FPS system fed off the bottom right hand tank

## PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

### Describe:

Heaxgaon agility was surprised that this was not converted to a normally closed system that only activates when pressure is sent to the FPS device to activate. Heaxgon agility thought they had retrofitted all old units to the normally closed improved FPS design to prevent these issues
