Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

Upon notification from Mr. Kyzer, I advised him to isolate tracks on either side of this car until the car could be assessed. Code 3 was contacted and mobilized a crew. I was enroute as well. Upon arrival it was determined that the car was dripping from the bottom outlet stem packing gland due to the packing retainer nuts being several turns loose. The nuts were equally tightened until the leak stopped. The car was observed for several minutes, and no drips or leaks were observed. The bottom outlet was wiped dry, and the car was placed in HZ hold until an OTMA could be obtained by the shipper. Less than 1/2 gallon released and evaporated.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

Ensure the car is properly secured and ready for transportation.
