PART VI - DESCRIPTION OF EVENTS & PACKAGE FAILURE

- Describe the sequence of events that led to the incident and the actions taken at the time it was discovered. Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

The undeclared hazardous materials were tendered by a third party and picked up by carrier and delivered to destination facility (wastewater treatment facility were described as non-regulated wastewater) and as such the incident constituted an undeclared material that was non-conforming to the approval issued by consignee. On inquiry with the shipper/wastewater generator, it was discovered that an unknown quantity of sodium hydroxide had been combined with the wastewater. The wastewater was placed into a tanker of aluminum construction, so the mechanism of failure appears straightforward. The release occurred on consignee property before being assessed for formal receipt and treatment. The release was controlled and the affected area is being remediated.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:

Clarify the nature of materials provided by the shipper. Screen materials on pickup for pH. Re-screen materials on receipt. Ensure lading is compatible with tank construction,
