Describe:

On August 17, 2024, at 1400 hours, personnel in the CSXT Mulberry Yard discovered tank car TEIX 3132, loaded with Elevated Temperature Liquid, NOS (Asphalt) appeared to have product adhering to side of tank car. The car was isolated and the shipper, Vertex Energy, was notified via CHEMTREC (Report #2024081700082). Huls Environmental, a CSXT response contractor, was dispatched to inspect the car. Response personnel confirmed asphalt adhering to side and top of tank car, additionally it was noted that product had released due to an improperly secured manway cover. Specifically, 4 of the 8 manway cover swing bolts not applied; 4 of the 8 manway cover swing bolts were less than tool tight; and the manway cover gasket was aligned. Contractor personnel inspected and reinstalled the gasket, and properly secured the manway cover for transportation. All hazardous product adhering to the exterior of the tank was removed. The issue identified and corrective actions were communicated to the shipper's representative (Scott Ehrlich at 281-799-8576).
