Describe the package failure, including the size and location of holes, cracks, etc. Photographs and diagrams should be submitted if needed for clarification. Estimate the duration of the release, if possible. Describe what was done to mitigate the effects of the release. Continue on additional sheets if necessary.

Describe:

Tank car GATX 109865 was reported to be leaking with visible vapor release and icing on the protective housing while in the BNSF Everett Delta yard. The car was isolated and responders were mobilized to inspect. Upon inspection, it was found that the sample line valve was cracked near the threads to the sample line nipple. A Midland kit was installed to control the release. GATX 109865 was transferred to the FURX 130095. The cracked sample valve was removed from the car and a cap installed to secure the car for movement under an OTMA to shop for repairs. Release estimates are based upon evaluation of outage at the time of the response in comparison to original outage. All released Butane dissipated to atmosphere.

PART VII - RECOMMENDATIONS/ACTIONS TAKEN TO PREVENT RECURRENCE

- Where you are able to do so, suggest or describe changes (such as additional training, use of better packaging, or improved operating procedures) to help prevent recurrence. Provide recommendations for improvement to hazardous materials transportation beyond the control of your individual company. Continue on additional sheets if necessary.

Describe:
